

PiggyBack Ladder Racks are designed for those who need to carry extension ladders, step-ladders, or multi-positional ladders on their personal vehicles. Ideal for the contractor, handyman, home inspector, insurance adjuster, window washer or anyone with a need to transport ladders on a frequent basis.

PiggyBack Ladder Racks are laser cut and custom bent from 1/8 inch thick high grade 5052-H32 aluminum commonly used for bodies of aircraft, boats, buses, trucks, and trailers. This aluminum has high resistance to corrosion from chemicals and salt water.

Mounting brackets are constructed from 1/8 inch stainless steel. They are adjustable to fit any auto manufacturer's roof rack with cross bars or after-market roof racks such as 'Yakima' or 'Thule'.

Patent Pending / Made in the USA

TESTIMONIALS

"I use my 4 wheel drive for work. It has a factory luggage rack that I would tie my ladder down to. I use my ladder several times a day and it was always a pain to load and unload. Now it takes a fraction of the time!"

"Our family has one vehicle that we use for work and personal use. My wife hated driving the SUV with ladders on. With your Ladder Rack, it's easy for me to take the ladders off when she needs the car and the low profile of the rack doesn't make her feel like she is driving a work van. "

"I use my extension ladder daily for work. I would bungee it to the top of my Suburban. It took a lot of time and wasn't secure. Your ladder rack solved that – it's easy to use and very secure. Kudos! "

**SAFE AND EASY TRANSPORT
OF YOUR LADDERS**

EXTENSION LADDER RACK

EXT-6

The PiggyBack EXT-6 Ladder Rack has a low, sleek profile that sits on top of your vehicle's roof rack and is designed to carry **extension ladders**.

The ladder rack is 6 feet in length with side rails to cradle your ladder and control lateral movement of the ladder. U-bolts restrain forward and backward movement of the ladder on the rack. U-bolts and D-rings provide ample anchor points to tie down your ladder with approved restraints.

All PiggyBack Ladder Racks can be assembled in multiple configurations to fit any vehicle having a factory installed roof rack with cross bars. Ladder racks can also be installed on after-market roof racks such as 'Yakima' or 'Thule'.

ADJUSTABLE LADDER RACKS

ADJ-6

The ADJ-6 Adjustable Ladder Rack can be configured to carry **extension ladders, step ladders and multi-positional ladders**. The ADJ-6 has side rails connecting the front and rear wide cross bars of the rack to control lateral movement of the ladder. The ADJ-6 is 6 feet in length and provides a longer support base to fit larger vehicles. The side rails of the rack can be configured parallel to each other for extension ladders or with side rails flared to fit step ladders or multi-positional ladders.

ADJ-4

The ADJ-4 adjustable ladder rack has the same functionality of the ADJ-6 but is 4 feet in length to accommodate smaller vehicles.

MINI LADDER RACKS

EXT-MINI

The EXT-MINI is designed to carry **extension ladders**. The EXT-MINI has two ladder brackets designed to fit on the front and rear cross bars of your vehicle roof rack. Raised tabs on the ends of the brackets control the lateral movement of your ladder without the full-length side rails.

ADJ-MINI

The ADJ-MINI is an adjustable ladder rack that can be configured to carry **extension ladders, step ladders or multi-positional ladders**. Similar to the EXT-MINI, the ADJ-MINI has two ladder brackets designed to fit the front and rear cross bars of your vehicle roof rack in an adjustable model.
